

Fisheries Statistics & Stock Assessment

- ◆ Standardised and implemented the Multistage Stratified Random Sampling Design for collection and estimation of marine fish landings in India.
- ◆ Estimated marine fish production statewise, specieswise, gearwise together with effort expended.
- ◆ Analysed the region-wise, assemblage-wise trends in production
- ◆ Conducted Quinquennial Frame Surveys for determining the fisherfolk population, craft, gear and other infrastructure details.
- ◆ Statistical database on a large number of species of pelagic and demersal fishes, crustaceans and molluscs over space and time.
- ◆ Methods for estimating vital statistics for stock assessment.
